Transform Fixed Income

Turn Opportunities into Optimization

Find opportunity in fixed income

Sophisticated equity investors appreciate the importance of tax efficiency. Minimizing tax friction in the investment process is equally important in fixed income. But building an optimal solution across fragmented and inefficient bond markets is more complicated than it appears. That's where Parametric can help. Parametric's advanced technology makes it easy to invest systematically and tax efficiently. We can help you navigate complex interest rate environments, seek to enhance after-tax returns, and customize exposures to fit your needs and goals.

Our Radius technology platform includes a dedicated fixed income engine that optimizes the overall bond investing process, transforming inefficiency into opportunity.

Invest intelligently with Radius Fixed Income

Radius Fixed Income harnesses data and quantitative tools to build portfolios with year-round active tax management and a broad range of customization options. This proprietary platform aggregates key market segments into a single location, allowing managers and traders to efficiently isolate the most attractive offerings among thousands of bonds. Account transitions become easy and transparent, with fast execution and open access to our portfolio managers. As a result, this proprietary, integrated multi-asset technology platform contributed to more than 19% asset growth and account growth in its first year, while helping deliver tax efficiency for clients.

Source attractive bonds, at attractive prices

Radius compiles thousands of line items in the secondary market, along with any new-issue securities, to populate portfolios with attractive bonds available across the fixed income universe.

Our team evaluates more than 175,000 bond offerings every day. We identify mis-priced bonds and attempt to select the ones suited to your objectives. As of December 31, 2025, we traded an average of more than \$220 million per day across municipals, corporates and preferred bonds. In aggregate, that's more than \$48 billion in tax-exempts and more than \$20 billion in taxables across hundreds of thousands of trades and more than a million separate account allocations.¹

The power of networks

RADIUS BY PARAMETRIC **Radius seeks to drive better portfolio outcomes**

Market data consolidation

- Primary and secondary market data
- Bids wanted and historical trade data
- Credit and liquidity analysis

Client customization

- Maturity and duration
- State and sector exposure
- Credit quality
- Investor's tax rate
- Strategy rules and guidelines

Radius portal

Harnessing the power of technology allows Parametric portfolio managers to:

- Match portfolio needs with attractively priced bonds
- Increase speed of investment
- Efficiently execute tactical portfolio adjustments
- Facilitate opportunistic relative value trading
- Deliver enhanced customization
- Systematically harvest tax losses year round

Bespoke investor portfolio

Harvest losses to boost your after-tax returns...

Tax loss harvesting enables you to dynamically realize or “harvest” losses throughout the year and use them to offset capital gains elsewhere. Harvesting may help you save on taxes, and potentially keep more of what you earn and reinvest that difference—known as tax alpha—in your portfolio. And that strengthens your ability to compound, grow your wealth and achieve your goals. Even a small reduction in current taxes can have large consequences for wealth accumulation over time. For example, an improvement of 0.5% per year in after-tax returns may result in a wealth difference of 50% after 30 years of distributions.²

...using separately managed accounts (SMAs)

Historically a tool of ultra-high-net-worth individuals, SMAs are professionally managed portfolios where the investor owns the underlying securities rather than commingled shares. That direct ownership enables a high degree of flexibility to accommodate your goals, values and strategies—including year-round active tax management.

Parametric's year-round approach

Many investors harvest losses at year-end, but yields rarely peak then. Using Radius, we seek to take advantage of market movements throughout the year. This enables investors to potentially benefit from periods of short-term volatility whenever they occur, potentially adding up to 30 basis points (bps) in after-tax excess returns for fixed income portfolios.³

Increased scale and efficiency

Benefit from a streamlined tax loss harvesting process that eliminates the need for analysis at the individual lot level.

Optimized sales timing

Receive ongoing loss-harvesting opportunities while avoiding wash-sale violations.

Reduced cash exposure

Return to the market faster through access to ready replacements and targeted reinvestment at potentially higher yields.

Minimized transaction costs

Improve liquidity through account aggregates to evaluate loss-harvesting opportunities.

³ Andrew Kalotay, “Tax-Efficient Trading of Municipal Bonds,” *Financial Analysts Journal* 72, no. 1 (2016): 48–57. This study did not involve Parametric or its clients. There is no guarantee that a tax management strategy will result in increased after-tax returns. Results will differ based on an individual investor's circumstances.

How tax loss harvesting works in fixed income

Two bonds (A and B) are issued with a similar dollar price, coupon rate, maturity date and yield to worst. Investor purchases Bond A.

Yields in the market increase, decreasing the price of both Bonds A and B.

The investor sells Bond A, and swaps into Bond B, increasing their yield and realizing a tax loss (tax asset).

If the market recovers, increasing bond prices for both Bond A and B.

Bonds A and B mature at Par. Bonds A and B have experienced the same return profile from time of issuance to time of maturity, however the investor was able to generate a tax asset swapping between the similar bonds after yields spiked.

Over the course of 2024 and 2025⁴, we were able to save our clients more than \$198 million in taxes across municipals and corporates, even with positive performance from fixed income indices.

2024

\$76 million in total tax savings
 \$14+ billion in market value sold
 \$386 million in tax losses

2025

\$122 million in total tax savings
 \$13+ billion in market value sold
 \$362 million in tax losses realized

⁴ The information is provided for illustrative purposes only. Values are aggregated across all fixed income separately managed account strategies. Only client positions with unverified cost basis were excluded from calculations. Loss calculation is based on the amortized book price minus the sell price, represents historical information and should not be construed as future results. Loss information illustrates the effect to a portfolio and is not representative of, and should not be construed as, performance. There is no assurance that tax loss harvesting will continue in the future. There is no guarantee that any specific account may engage in tax loss harvesting.

Customize at new heights

We deliver personalized portfolios that seek to meet each investor's unique goals, values, tax circumstances, and risk considerations. Through our broad product suite and a customization engine that offers over 100 options, our dedicated team constructs precise portfolios tailored to fit you.

Objectives

Pursue steady potential income or strong total return.

Maturities

Identify maturity dates ranging from one month to 20 years out.

Geography

Find opportunities nationally and in 19 specific states.

Distributions

Plan to reinvest the proceeds of maturing bonds or receive them in cash.

Tax-aware optimization

Seek improved after-tax performance through year-round loss harvesting.

Asset classes

Select from municipal, US corporate, or Treasury bonds.

Durations

Choose short, intermediate, or long-duration strategies.

Credit ratings

Set your credit risk tolerance from AAA to BB.

Transitions

Hold on to existing fixed income securities or move them out gradually.

Responsible investing

Use one or a blend of 50 ESG screens to align your portfolio with your principles.

The Parametric difference

When you work with our fixed income team, you'll get:

Personalized portfolios

From active tax management to responsible investing guidelines and more, we build portfolios for your needs.

Advanced technology

Powered by Radius, our optimized portfolio construction process supports faster technology investment and relative value trading opportunity capture.

Exceptional client service

You'll work with a portfolio manager who provides high-touch consultation and efficient implementation.

Corporate debt securities are subject to the risk of the issuer's inability to meet principal and interest payments on the obligation and may also be subject to price volatility due to such factors as interest rate sensitivity, market perception of the creditworthiness of the issuer, and general market liquidity. When interest rates rise, the value of corporate debt securities can be expected to decline.

Debt securities with longer maturities tend to be more sensitive to interest rate movements than those with shorter maturities. Company defaults can impact the level of returns generated by corporate debt securities. An unexpected default can reduce income and the capital value of a corporate debt security. Furthermore, market expectations regarding economic conditions and the likely number of corporate defaults may impact the value of corporate debt securities.

An imbalance in supply and demand in the municipal market may result in valuation uncertainties and greater volatility, less liquidity, widening credit spreads, and a lack of price transparency in the market. There generally is limited public information about municipal issuers. As interest rates rise, the value of certain income investments is likely to decline. Longer-term bonds typically are more sensitive to interest-rate changes than shorter-term bonds. Investments in income securities may be affected by changes in the creditworthiness of the issuer and are subject to the risk of nonpayment of principal and interest. The value of income securities also may decline because of real or perceived concerns about the issuer's ability to make principal and interest payments.

There is no assurance that a separately managed account (SMA) will achieve its investment objective. SMAs are subject to market risk, which is the possibility that the market values of the securities in an account will decline and that the value of the securities may therefore be less than what you paid for them. Market values can change daily due to economic and other events (natural disasters, health crises, terrorism, conflicts, social unrest, etc.) that affect markets, countries, companies, or governments. It is difficult to predict the timing, duration, and potential adverse effects (portfolio liquidity, etc.) of events. Accordingly, you can lose money investing in an SMA.

Investment strategies that seek to enhance after-tax performance may be unable to fully realize strategic gains or harvest losses due to various factors. Market conditions may limit the ability to generate tax losses. Tax loss harvesting involves the risks that the new investment could perform worse than the original investment and that transaction costs could offset the tax benefit. Also, a tax-managed strategy may cause a client portfolio to hold a security in order to achieve more favorable tax treatment or to sell a security in order to create tax losses. Prospective investors should consult with a tax or legal advisor before making any investment decision.
